

***Imagine an Industry without loss.  
A manufacturer without unscheduled downtime***

Diagsense enables you to upgrade your monitoring system to a new level. Diagsense provides you with a real-time online prediction of failures in your system. We offer the opportunity to know about an evolving failure in your system at an early stage of its formation, long before it becomes an actual problem. Enabling the deployment of maintenance teams or preventative action at your discretion. Using our solution you will gain a wide range of benefits:

- A robust monitoring system running 24/7 without the need for recalibration at any change in operational state of the monitored object.
- No misdetections
- We are committed to no more than 2.5% false alarms
- Easy integration with your existing system.
- No installation of additional equipment is required.
- Significantly improves the flow of operation using existing equipment
- Our system is self-adaptive to the changes in the environment and doesn't require human intervention.
- Our system will alert a sudden failure much faster than any other existing monitoring system.

***At one of our implementations DiagSense's system discovered an oil leak within 20 seconds while the in-house, incumbent system took 390 seconds to identify!***

**With us...**

- You can migrate maintenance programs from scheduled to predictive.
- You will minimize idle time.
- Can mitigate your environmental exposure.
- You will return your investment in no time!
- You will find out that our solution influences your operational efficiency and savings!
- You will be able to sleep easier at night, knowing that your system is in capable hands.
